

TELEHEALTH MEDICAL DIAGNOSTIC SYSTEM

sk telemed
GOOD HEALTH-GOOD LIFE!

The background image shows a collection of medical diagnostic tools on a wooden surface. In the center is a tablet displaying a software interface with a circular graphic and a green button. To the right is a grey blood pressure cuff with its tubing. In the foreground, there are three colored wristbands (green, black, red) and a yellow one, each with a metal contact. A white glucose meter is also visible. A small container of test strips is partially seen. The text is overlaid on the left side of the image.

IDIS2GO[®] is a telehealth medical diagnostic system to perform remote collection, transmission and storage medical information about the patient physiological parameters and vital signs

Benefits of

Protection against the spread of coronavirus

Remote examination and monitoring with IDIS2GO are an effective approach to avoid deterioration during the COVID-19 pandemic

Remote diagnostics for everyone and everywhere

Store-&-forward telehealth solutions that provide high quality patient diagnostics in remote locations

Portable mini-hospital in one IDIS2GO kit

A wide range of connected medical devices to perform a comprehensive vital signs diagnostics

The background of the slide features a hand holding a glowing globe. Overlaid on the globe is a futuristic, circular interface with concentric rings and a central globe. The interface has a blue and white color scheme. The background also shows a blurred office or laboratory setting with desks, computers, and chairs. A network of white lines and dots is overlaid on the entire image, suggesting a global or interconnected theme.

As a comprehensive IoT & cloud solution, the IDIS2GO product is actively used in remote healthcare, and can be fully integrated into e-health systems around the world

«M» version
includes:

- 
- infrared thermometer
 - glucometer
 - spirometer
 - urine analyzer
 - vital signs patient monitor
(with 12-channel ECG, Blood pressure monitor and pulse oximeter)

«T» version
includes:

- infrared thermometer
- glucometer
- spirometer
- urine analyzer
- pulse oximeter
- blood pressure monitor
- portable ECG, tablet

A hand wearing a white latex glove holds a silver and black pen, poised to write on a white clipboard. The background is a soft-focus image of a person in a white lab coat.

List of all devices

complete telehealth diagnostic
solution in one bag

Urine analysis

The device uses a three-color RGB (red-green-blue) measurement system. It checks over 10 basic parameters: glucose, bilirubin, etc

Dermoscopic examination

With a high quality magnifying lens and powerful lightings, the dermatoscope allows examination of skin structures and patterns

Hemoglobin & Lipid test

Measure a blood concentration of hemoglobin (ctHb) and a lipid panel beyond the laboratory

POCT & Drug screening

POCT-analyzer and drug tester for multiplexed point-of-care testing (xPOCT) in-field

Auscultation

Using a stethoscope, auscultation is performed to examine the circulatory and respiratory systems and the gastrointestinal tract

Ultrasound scanning

Ultrasound scanning with high line density scan mode for better resolution

Digital Video Otoscope

Digital Video Otoscope is a special purpose digital video camera combined with a high magnification lens and multiple ultra-bright LEDs.

Temperature measurement

Taking temperature is a relatively simple procedure with a modern infrared head/ear thermometer

Pulse oximetry

Pulse oximetry is a noninvasive and painless test that measures your oxygen saturation level, or the oxygen levels in your blood

ECG research

Device displays electrocardiogram signal curve, heart rate (HR) to record a continuous 12-lead ECG (Einthoven-Goldberger-Wilson)

Blood glucose measurement

Smart blood glucose monitoring system is comprised of the glucometer and the blood glucose test strips

Spirometry test

Respiratory function test. The spirometer records the amount and the rate of air that are breathing in and out over a period of time

Blood pressure measurement

The module with a blood pressure cuff to measure systolic blood pressure, mean pressure, diastolic blood pressure

Ultrasonic Pocket Doppler

Personal Fetal Doppler is a portable fetal heart rate (FHR) equipment that is specifically designed for pregnant women to perform their daily FHR on their own

Hemoglobin Analyzer

The device uses a three-color RGB (red-green-blue) measurement system. It checks over 10 basic parameters: glucose, bilirubin, etc

White Blood Cell Analyzer

With a high quality magnifying lens and powerful lightings, the dermatoscope allows examination of skin structures and patterns

Hemoglobin & Lipid test

Measure a blood concentration of hemoglobin (ctHb) and a lipid panel beyond the laboratory

Personal breath alcohol tester

The device uses a three-color RGB (red-green-blue) measurement system. It checks over 10 basic parameters: glucose, bilirubin, etc

12-channel electrocardiograph

With a high quality magnifying lens and powerful lightings, the dermatoscope allows examination of skin structures and patterns

ECG workstation

Measure a blood concentration of hemoglobin (ctHb) and a lipid panel beyond the laboratory

USE CASES

a high quality diagnosis in any
patient location

- Health screening points in pharmacy, shopping mall, fitness center, post-office
- In ambulance
- In clinic
- In retirement homes
- In hospice care
- In outpatient clinic
- In offices / production

| At patient's home including those on self-isolation
and with limited mobility

| At ski resorts
| At sports training bases

| In remote locations and rural areas

- On oil platforms
- In police stations
- In military units
- In prisons
- At fire departments
- During the emergencies and natural disasters
- On transport – planes, cars, trains etc

HOW IT WORKS:

Remote access to diagnostic results:
there are pictures, reports and
the possibility to interact with the EHR

System features:

- Data Exchange with medical information systems
- Offline/online data storage
- Research in LOINC standard
- Quick order of consumables

Usability features:

- No additional software need to be used
- Online guides for doctors and patients
- Technical and users support

Artificial intelligence (AI) to support
the doctor's decision

Significant change in the world public health paradigm:

- No additional software need to be used
- Online guides for doctors and patients
- Technical and users support

| new age of remote
| medical care

Worldwide network

SK-Telemed GmbH is a virtual healthcare provider from Vienna, Austria. We develop precise digital tools for remote monitoring, treatment, communication, and care that elevate the quality of medical service worldwide

SK-Telemed GmbH is certified with **ISO 9001:2015** and **13485:2016** by **Quality Austria** and **IQNet International Certification Network**

Our **IDIS2GO** product is ISO & CE certified
